

BITS that BITE!
Won't let you go...

No matter what task you are facing - with kwb you will always find the perfect bit match!

The new kwb bit range is a competent solution we offer for your market. No need for you to invest time in planning your product lines, we have done this job for you! We have compiled your complete product range: Different applications with different quality, to meet the requirements of the end consumer. Opt for our concept and the consumer will not have any problems to find the right product at the POS. Our trendy and competent product line is continuously adjusted to the demands of the market.

"Can I unscrew the glass from the

smartphone? How do I get to the deep-seated screws from the coffee maker?" - The new technical developments on the market require new tool solutions. Therefore, kwb offers a wide range of safety and micro bits for you and your customers already today. We notice the market trends and are permanently working on new products. We from kwb have the proper tools for your customers. When we design our product range and fix our prices we have your rate of return in mind. Now the most common bits will come as set of three to increase the

value per item and thus your sales per unit area. We also have the theft protection in mind and introduce a safe blister package for our bits with our new assortment. And our development process also includes the needs of the end consumers.

Facts that GRIP

- **Trendy** and **competent** product range
- Always **up-to-date**
- High quality **TQ60** steel for above-average tool life even with extreme requirements
- **Torsion zones** especially adapted to the application requirements
- The bits grip any screw with the **Mega Grip Ribs (MGR)**
- **Colour coding** on the package for easy allocation of different fields of application
- **Coloured rings** on each individual bit for quick search of the correct screw shape
- **Only vendor** of a complete choice of **micro bits**
- **Protection** against theft by secure blister package
- The packages are provided with **customer-friendly pictograms**
- Components at the point of sale are equipped with an informative, modern customer guidance system, which also serves for consumer orientation
- The customer guidance system can take some of the load off your sales staff
- No more helpless consumers who do not know what to buy.

Along with the individual bits our assortment also includes a selection of bit boxes and the patented Handy Bit Boxes, compiled by various customer requirements.

The kwb product offering is topped off by different bit sets and a wide range of accessory products such as bit holders and adapters.

So what distinguishes the new bit assortment from the competition?

The new kwb bit range is the most **comprehensive** and most **complete** assortment in the market.

We currently have the largest **internationally** available selection with more than 250 different individual bits and more than 30 bit boxes.

You will find this variety and product mix depth only with kwb!

The high-quality **TQ60** steel we use is characterised by special hardness which makes your bit extremely durable. However, it also offers the flexibility you need in particular for screw connections with a high resistance.

In the future, almost all kwb bits will be equipped with the kwb **"Mega Grip Ribs"**. These profiles directly at the bit's head prevent the bit from slipping out of the screw during tightening, also with high speed of the cordless screwdriver! Thus, stripping of the bit and as a result a screw which can no longer be used is almost completely excluded.

Furthermore, all kwb bits are equipped with colour rings. From now on, you can immediately allocate a bit to its function by **colour coding**, because a colour always corresponds to a special type of screw.

The kwb **"EXTREME FORCE"** bits are another special feature. Extensive tests in our laboratories have shown that a length of 30 mm provides the best power for transmission of the force by the impact screw driver, however this can reduce with a longer range. The result of this special length is an exceptionally high and long-lasting power rating of these particularly strained bits.

As sole vendor of a **complete "Micro Bit assortment"** you will also find the necessary special bits for the repair of all customary phones, game consoles, cameras, laptops, computers, household appliances, glasses and many more, regardless of the brand of the device.

kwb also differs a lot from other manufacturers in the range of the **"sets"**. We have compiled for you many special sets for particular applications so that you will always have the right bit at hand by picking the colour-coded box.

Our **"Handy Bit-Box"** is a **special feature** among the sets.

Developed by kwb, it fits conveniently into any shirt or trouser pocket. Its format is smaller than a cigarette packet but includes 10 bits which are offered in 6 different variants (matched to the application). Whether for the professional craftsmen, do-it-yourselfer, IT specialist, optician, tinkerer etc., this assortment includes the proper bit for any screw.

Having this choice, no customer will leave your shop unsatisfied because the new kwb bit line offers a solution for any problem. Time and again they can rely on you as a perfectly equipped specialist.

**We are your competent partner who always has the proper accessories for your customer!
So let's tackle it together and make your customers happy!**

The kwb brand stands for **QUALITY!**

kwb's three-stage quality system always gives the consumer the right tool for assignment and frequency of the job.

★★★★★
PROFESSIONAL

Best kwb quality, suitable also for professional use.

★★★★★
HIGH QUALITY

High-grade kwb quality, suitable for all professional handymen.

★★★
QUALITY

Good usability and kwb quality for do-it-yourselfers.

BITHOLDERS

BITHOLDERS

The kwb bitholders always have a lock on the bit.

Bitholders provide for tight fit of the bit and the screw in any working position. Depending on the design, the magnet holders can be placed into drill chucks, SDS-Plus adapters or directly into the machine connection. The stainless steel sleeves provide for excellent surface quality. The strong permanent magnets keep bit and screw securely in position. The quick-change functions of some models make bit exchange easy as pie.

kwb bitholders for quick, neat and safe working!

The necessary information in the form of simple pictograms is found on the package.

BEST OF

TRIPLE FIX Quick-Change bitholder

PROFESSIONAL ★★★★★

The Triple Fix quick-change bit holder has a swivel-mounted ball head to install screws with a portable electric drill also at inaccessible spots, where the machine's drill chuck would be a hindrance. The swivel-mounted ball head can be deactivated by retracting the loose guide sleeve and used as standard bit holder. Hexagon adapter 1/4" according to ISO 1173, with a strong permanent neodymium magnet, snap ring, quick-change function, single-hand operation. Bit release simply by retraction of the metal sleeve, hexagon 1/4" adapter shaft according to ISO 1173, E 6.3.

***EXTREME FORCE* BITS**

EXTREME FORCE bits

The kwb **EXTREME FORCE** bits are manufactured of high-quality **TQ60** steel and are consistently hardened. The specially developed technology provides for best-possible utilisation of material properties and optimally adjusted geometry, which results in over-average service life also with extreme requirements.

This bit line is equipped with a maximum-length **torsion zone** which allows for distortion of the bit tip in the event of peak loads. Thus, the flexible torsion zone protects the bits from early breaking at load and therefore increases the service life. Due to the individual **torsion shape** and particularly elastic materials the **EXTREME FORCE** bits achieve a significantly longer tool life as compared to customary bits: Depending on the drive, an increase in performance can be achieved which is 5 times better than for standard bits.

The precision-engineered profile tip prevents the screw from slipping out and therefore also extends the tool life. These bits were developed for extreme requirements and are absolutely impact resistant. This makes them perfectly suitable for use with **impact screwdrivers**.

The *EXTREME FORCE* bits are recommended for craftsmen and demanding do-it-yourselfers.

The necessary information is found on the package in the form of simple pictograms, which are easily understood. The kwb bits are consistently identified with a practical colour ring so that the shape of the bit is easily recognised even after the package has been disposed of.

DIAMOND

***DIAMOND* BITS**

DIAMOND bits

The kwb **DIAMOND** bits are manufactured of high-quality **TQ 60** steel and are consistently hardened.

The corrosion-resistant diamond coating - **made in Germany** - provides for best torque transmission and prevents the screw from slipping out by increased frictional resistance. Due to the diamond coating the bit is securely kept in the screw which reduces the need for additional contact pressure to the machine.

This bit line is equipped with a special **torsion zone** which allows for distortion of the bit tip in the event of peak loads. Thus, the flexible torsion zone protects the bits from early breaking at load and therefore increases the service life.

The kwb *DIAMOND* bits are ideal for frequent screw connections and effortless working.

The necessary information in the form of simple pictograms is found on the package. The kwb bits are consistently identified with a practical colour ring so that the shape of the bit is easily recognised even after the package has been disposed of.

INOX

***INOX* (stainless steel) BITS**

INOX (stainless steel) Bits

The kwb **INOX** Bits are made of stainless steel and consistently vacuum-hardened. This special hardening process gives the bits the necessary strength values for irregular, tough screw applications.

This product line has been developed for stainless steel screws to prevent extraneous rust by the drive. Stainless steel bits prevent corrosion of the screw and the workpiece at the screw connection.

Despite of the high surface hardness the bits from kwb remain flexible and break-proof due to the special **torsion zone**. The torsion zone allows the tip to distort in the event of peak loads. Thus, the torsion zone protects the bits from early breaking at load and therefore increases the service life.

The bits of this product line are additionally equipped with the kwb **Mega Grip Rips**. These diagonal profiles at the so-called head of the bit prevent the bit from slipping out of the screw during tightening. The bit literally "bites" into the screw and provides for easy and quick tightening.

Ideal for outdoor use, such as for instance patio flooring, pergola, benches.

The necessary information in the form of simple pictograms is found on the package. The kwb bits are consistently identified with a practical colour ring so that the shape of the bit is easily recognised even after the package has been disposed of.

INOX bits

kwb
GERMANY GMBH

***TITANIUM* BITS**

TITANIUM bits

High-quality **TQ60** steel is used to manufacture the kwb **TITANIUM** bits. The surface of the bits is nitrided with **TITANIUM** in a special manufacturing process. This surface hardening increases the strength of the steel and ensures over-average tool life at highest continuous loads. Despite of the high surface hardness the **TITANIUM** bits from kwb remain flexible and break-proof due to the special **torsion zone**. The torsion zone allows the tip to distort in the event of peak loads. Thus, the flexible torsion zone protects the bits from early breaking at load and therefore increases the service life.

The bits of this product line are additionally equipped with the kwb **Mega Grip Rips**. These diagonal profiles at the so-called head of the bit prevent the bit from slipping out of the screw during tightening. The bit literally "bites" into the screw and provides for easy and quick tightening.

The *TITANIUM* bits are particularly suitable for serial screw connections.

The necessary information in the form of simple pictograms is found on the package. The kwb bits are consistently identified with a practical colour ring so that the shape of the bit is easily recognised even after the package has been disposed of.

TITANIUM bits

TITAN bits, 25 mm

PROFESSIONAL ★★★★★

The kwb Titanium bits are particularly suitable for serial screw connections. Made of titanium-nitrided TQ 60 steel. This surface finish where the titanium and the TQ 60 steel coalesce increases the strength of the steel and ensures over-average tool life with highest continuous load. The extremely hard titanium surface combined with the torsion zone and the Mega Grip Ribs increases the bit's tool life by approx. 600% . With colour-coded rings to distinguish the shape of the head. 1/4" C 6.3 shank.

TITAN bits, 25 mm

PROFESSIONAL ★★★★★

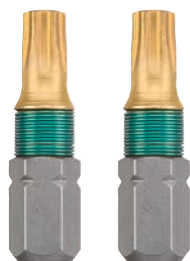

The kwb Titanium bits are particularly suitable for serial screw connections. Made of titanium-nitrided TQ 60 steel. This surface finish where the titanium and the TQ 60 steel coalesce increases the strength of the steel and ensures over-average tool life with highest continuous load. The extremely hard titanium surface combined with the torsion zone and the Mega Grip Ribs increases the bit's tool life by approx. 600% . With colour-coded rings to distinguish the shape of the head. 1/4" C 6.3 shank.

TORSION

TORSION BITS

TORSION bits

High-quality **TQ 60** steel is used to manufacture the kwb **TORSION** bits.

This bit line is equipped with a special **torsion zone** which allows for distortion of the bit tip in the event of peak loads. Thus, the torsion zone protects the bits from early breaking at load and therefore increases the service life.

The bits of this product line are additionally equipped with the kwb **Mega Grip Rips**. These diagonal profiles at the so-called head of the bit prevent the bit from slipping out of the screw during tightening. The bit literally "bites" into the screw and provides for easy and quick tightening.

The necessary information in the form of simple pictograms is found on the package. The kwb bits are consistently identified with a practical colour ring so that the shape of the bit is easily recognised even after the package has been disposed of.

INDUSTRIAL STEEL BITS

INDUSTRIAL STEEL bits

The bits of the **INDUSTRIAL STEEL** product line are made of high-quality **TQ 60** steel.

There is a multitude of customary screw profiles with length of 25 and 50 mm for almost any standard screw connections.

The **satin-chromium surface** provides for excellent corrosion protection and also is a visual highlight.

The bits of this product line are additionally equipped with the kwb **Mega Grip Rips**. These diagonal profiles at the so-called head of the bit prevent the bit from slipping out of the screw during tightening. The bit literally "bites" into the screw and prevent the bit from slipping out of the screw during tightening. The bit literally "bites" into the screw and therefore provides for easy and quick tightening.

The necessary information in the form of simple pictograms is found on the package.

PROBLEM SOLVER **(SPECIAL TYPES) BITS**

PROBLEM SOLVER (special types) bits

The new kwb bit range includes a variety of articles for special applications.

From extra long bits for countersunk screws to special bits for screw hooks to very long special bits with a different bit head on both ends, which is easily used for another type of screw by simply turning it around - always the proper tool for any **"special mission"**.

James Bond would be glad to have this choice for his missions!

The necessary information in the form of simple pictograms is found on the package.

SAFETY BITS

SAFETY bits

The technical development in the market of appliances requires innovative solutions also from the tool market. Many modern devices available in the retail market are equipped with special safety screws, the screw heads are of sophisticated shape and cannot be untightened with the standard bits.

You probably have experienced this situation: The old coffee maker is broken and the warranty period has just expired (what are the odds!). Of course, many people try to repair the appliances themselves. Appropriate instruction videos are often found online and the spare parts are also affordable.

But: The screws have a strange shape and no proper bit can be found in the tool box. Now you are faced with a real problem. We got the solution and have compiled a complete range of **SAFETY** bits for you.

Only kwb offers this wide range of safety bits with many different output shafts.

The necessary information in the form of simple pictograms is found on the package.

SAFETY Bits

SAFETY ROBERTSON bits, 100 mm

SPECIAL!

MICRO

MICRO BITS

MICRO bits

The market is crowded with different bits for nearly any standard screw connection. But does a vendor also think about your **individual** needs?

kwb aims to offer the proper tool for anyone. Therefore, you are always on our mind, dear model builders and tinkerers, mobile phone doctors and coffee lovers: our product range offers the proper bit.

kwb has not just special bit sets with micro bits. We go further and provide an individual solution for any screw connection:

Our product range even covers micro bits as individual item. So, if only one type of bit is missing there is no need to buy a whole set. Our "little helpers" for any application are manufactured of high-quality steel and precision-ground to perfectly fit into the small screw heads.

The necessary information in the form of simple pictograms is found on the package.

BIT BOXES and BIT SETS

BIT BOXES and BIT SETS

The kwb bit boxes provide the perfect solution for anything that needs to be fastened with screws. All different variants of boxes and sets include assortments of bits and holders tailored to the task.

The boxes are identified with different colours so you will easily recognise which box to take in order to quickly have the right bits at hand. No more long searching for individual bits - just take the set you need and get your work started. The result is quickly achieved and everything is safely stored - just as you need it!

Many kwb bit boxes are equipped with a belt clip which allows to safely fix the box on your trousers. A big advantage especially when working on ladders or at height.

The new kwb bit boxes in a patented design

Along with the familiar boxes there will be an innovative range of premium bit boxes for your cordless screwdriver. They have the proven clip to wear the box on the belt. This allows you to open the box and even change the bit with the cordless screwdriver in your hand. Depending on the variant, these boxes also include bits with a length of 50 mm, which are often necessary. All boxes include a high-quality quick-change bit holder in matching colour of the box, as well as a box nut adapter for 1/4 inch box nuts.

The new kwb HANDY bit boxes

You need a bit set which simply includes all the basics and does not have lots of unwanted parts in an overdimensioned box? Then this box is exactly what you are looking for!

Smaller and slimmer than a cigarette package, this 12-pcs. set fits into any shirt or trouser pocket and even has a real screwdriver with removable magnetic holder for cordless screwdrivers.

Available in 6 different designs this is the ideal companion for people who know what they need!

BASIC USE

***BASIC USE* BITS**

***BASIC USE* bits**

The Basic bit line is made of **chromium-vanadium steel**.

The bits are suitable for all customary applications and available with different output shafts. The bits have a ¼" drive according to ISO 1173, Form C 6.3.

The necessary information in the form of simple pictograms is found on the package.
